## Unix System Install

### Allowed Machines

3 : This is main machine to be used for loading Linux.  
Sun : Not to be used - the class server is installed on it.

Version	Dual Boot	Surf Web	Remove	Date	Time	Lab Monitor
	Y / N	Y / N	Y / N			
	Y / N	Y / N	Y / N			
	Y / N	Y / N	Y / N			
	Y / N	Y / N	Y / N			

### Instructions to Student

Before you start installing, check with the lab monitor.  
Check the reservation sheet to make sure you will have enough time.  
You are to work ALONE on this - no one else is allowed to help you.  
If the install is successful, fill in the machine number, Unix version used.  
If the install is unsuccessful, return the machine to it's original state.  
You will need to try again some other time.  
At the end of term, you are to turn in this sheet. You get no credit if this is lost.

### Instructions to the Lab Monitor

Please examine the system.  
When the system boots, there should be a choice of Windows or Linux  
If yes, circle Y under Dual Boot  
Using a graphical browser go to a web site of your choice to make sure that the network connections are working. If it works, circle Y under Surf Web.  
Have the Student Remove Linux Partition and Dual Boot Option.  
When system reboots, it should go directly to Windows.  
If this works, circle Y under Remove  
If student needs the Image CD to reload the system, circle N under Remove  
Please then fill in the date and time, and sign your name.  
Thank you very much for your time.

**IMPORTANT - This document must be signed to receive credit for this assignment.**

By signing and turning in this document to be graded, I am asserting that I did all this work myself, and did not have anyone else assisting me.
